Core Competencies

We provide our clients analytic and public policy support within the intersecting domains of population health and health insurance, with a particular emphasis on the analysis of healthcare costs. We find health policy and management insights within real-world, messy primary and secondary data, including health insurance claims-level data, and present the findings in clear, easy to understand graphics, presentations, and reports. We set up ongoing reporting processes and train your team. We manage all phases of the analytics life cycle, from acquiring and exploring the data to analytic plan development to the final reporting – without losing sight of the goal of informing health policy and management.
